the tectonics of structural systems provides an architectural approach to the theory of structural systems the book combines structural recommendations to follow during the architectural design of various structural systems and the tectonic treatment of structural recommendations in architecture written expressly for students the book makes structures understandable and useful providing practical and useful knowledge about structures a design based approach to the subject of structures and a bridge in the gap between structures and the theory of design good architectural examples for each structural system are given in order to demonstrate that tectonics can be achieved by applying technical knowledge about structures over 300 illustrations visually unpack the topics being explained making the book ideal for the visual learner

most of the embodied energy can be saved in the load bearing structure conceptual design of structures is working at the interface between structural engineering architecture and art the book seeks to answer the complex question of what needs to be considered when conceiving a building structure what influences the process of conceptual thinking how do space and structure interact in what ways do architects and engineers work together the book thus sheds light on the topic of multidisciplinary interrelationships in design showing numerous different perspectives renowned practitioners and researchers from architecture and engineering share their insights as do artists and historians who cross the disciplinary boundaries furthermore this book also provides an outlook on possible future developments and aspects of sustainable design and construction bridging practice academic and research holistic perspectives through contributors from different disciplines numerous essays interviews and project reviews provide direct insights selected works from engineering architecture and art

this edited volume offers a new approach to understanding social conventions by way of martin heidegger it connects the philosopher

s conceptions of the anyone everydayness and authenticity with an analysis and critique of social normativity heidegger s account of the anyone is ambiguous some see it as a good description of human sociality others think of it as an important critique of modern mass society this volume seeks to understand this ambiguity as reflecting the tension between the constitutive function of conventions for human action and the critical aspects of conformism it argues that heidegger s anyone should neither be reduced to its pejorative nor its constitutive dimension rather the concept could show how power and norms function this volume would be of interest to scholars and students of philosophy and the social sciences who wish to investigate the social applications of the works of martin heidegger

building theories speaks to the value of words in architecture it addresses the author s fascination with the voices of architects engineers builders and craftspeople whose ideas about building have been captured in text it discusses the content of treatises essays articles and letters by those who have been throughout history committed to the art of building in this building theories argues for the return of a practice of architectural theory that is set amongst building buildings and builders this journey of close reading reinterprets the words of vitruvius alberti de l orme le camus de mézières boullée laugier rondelet semper viollet le duc hübsch bötticher berlage muthesius wagner behrendt gropius and arup with chapters dedicated to texts from antiquity the renaissance and the nineteenth century and with a critical eye on architectural theory popularized in the anglo saxon world post 1968 readers are introduced to a wider more inclusive definition of architectural ideas building theories considers how contemporary scholarship has steered away from the topic of building in its reluctance to admit that both design and construction are central to its concerns in response it argues for a realignment of architecture with the concept of techné with a dual commitment to fabrica e ratio with a productive return to l art de bien bastir with the accurate translation of the term baukunst and with an appeal to the architect s composite mind students practitioners and educators will identify in building theories ways of thinking that strive for the integration of design with construction reject the supposed primacy of the former over the latter recognize how aesthetics are an insufficient scaffold for subtending the subject of architectural ethics and
